Disposable non-absorbable ligating clips are medical devices used during surgical procedures to ligate (close off) blood vessels or other tubular structures. Made from biocompatible materials such as polymer or metal, these clips provide a secure and efficient way to control bleeding or prevent fluid leakage without the need for sutures. Unlike absorbable clips, these are designed to remain in the body indefinitely unless removed, making them suitable for long-term applications. Their disposable nature ensures sterility and reduces the risk of cross-contamination, making them widely used in minimally invasive and open surgeries.
