Disposable pressure infusion cuffs are medical devices designed to facilitate the rapid infusion of fluids and medications into a patient's bloodstream. These cuffs are typically used in emergency situations, surgeries, and critical care settings where quick administration of fluids is essential. Made from durable, yet lightweight materials, disposable pressure infusion cuffs can be easily placed around an IV fluid bag. They work by applying consistent pressure to the bag, ensuring a steady and controlled flow of fluids. The disposable nature of these cuffs reduces the risk of cross-contamination and infection, making them a safer option compared to reusable cuffs. They are convenient for single-use applications, eliminating the need for cleaning and sterilization, and ensuring sterility in each new use. Their design usually includes a pressure gauge and an inflation bulb to allow precise control over the pressure exerted on the fluid bag, ensuring optimal infusion rates tailored to the patient's needs.
