Needleless infusion connectors are one of the important components of needleless infusion systems. These connectors eliminate the need for steel needles to pierce rubber stoppers and connect infusion sets or syringes to indwelling cannulas, including CVC, PICC and peripheral intravenous catheters; The needle-based injection is changed to a needle-free injection system, and the sealing function of the infusion channel can still be maintained after the infusion set or syringe is disconnected. Needleless infusion connectors can avoid the use of needles for repeated punctures and reduce stabbing injuries to medical staff.

The global Disposable Sealed Needleless Infusion Connector market size is projected to grow from US\$ 1168 million in 2023 to US\$ 1596.4 million in 2030; it is expected to grow at a CAGR of 4.6% from 2024 to 2030.
