The global Disposable Spinal Needles market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Disposable spinal needles are medical devices used for spinal puncture procedures. They are designed for single-use, meaning they are used once and then discarded. These needles are specifically designed for accessing the spinal canal to administer anesthesia, inject medication, or collect cerebrospinal fluid (CSF) for diagnostic purposes. The spinal needles, or called spinal epidural needles, are used for lumbar puncture for spinal anesthesia. According to the different designs of the spine needle tip, disposable spinal needles are divided into spinal introducer needles and non-hurt spinal needles.

Disposable spinal needles typically consist of a sharp, beveled tip for easy insertion, a hollow bore for fluid transfer, and markings along the length to gauge the depth of insertion. They are available in various lengths and gauges to accommodate different patient sizes and procedural requirements.
