Disposable surgical sheet is a type of medical sheet that is designed to be used once and then discarded. These sheets are commonly used in hospitals and other medical settings to help maintain a sterile environment during surgical procedures. During surgery, disposable surgical sheets are used to cover the patient and the surrounding area to help prevent the spread of germs and maintain a sterile field. They can also be used to absorb blood and other bodily fluids that may be produced during the procedure. After the surgery is complete, the disposable surgical sheets are removed and discarded. This helps to ensure that the area remains clean and free from any potential contaminants.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
