Disposable tissue closure clips are medical devices used to secure the edges of a wound or incision together. They are typically made of biocompatible materials such as stainless steel or titanium and come in various sizes and designs.

These clips are used in surgical procedures to close wounds or incisions in a quick and efficient manner. They are often used in place of traditional sutures or staples, as they offer several advantages. Disposable tissue closure clips are easy to apply and remove, reducing the time required for wound closure. They also provide a secure and reliable closure, minimizing the risk of wound dehiscence or infection.

The clips are typically applied using a specialized applicator or clip applier, which allows the surgeon to accurately position and secure the clip onto the tissue. Once applied, the clips remain in place until the wound has healed sufficiently, at which point they can be easily removed.

Disposable tissue closure clips are commonly used in various surgical specialties, including general surgery, orthopedics, plastic surgery, and gynecology. They are particularly useful in procedures where a quick closure is desired, such as laparoscopic surgeries or minimally invasive procedures.
