The global Distal Access Guiding Catheter market size is predicted to grow from US\$ 230 million in 2025 to US\$ 366 million in 2032; it is expected to grow at a CAGR of 7.0% from 2026 to 2032.

Distal access guiding catheters are high-value consumables used in neurointerventional or peripheral vascular interventional procedures. Designed to reach intracranial or distal blood vessels via approaches such as the femoral artery, they provide stable support and delivery channels for devices such as microcatheters and thrombectomy stents, exhibiting high flexibility, strong flexural strength, and excellent delivery performance. The upstream of the industry chain includes suppliers of medical polymer materials (such as Pebax, nylon, and polyurethane), contrast rings (platinum-iridium alloy), braided/spring-wound reinforcing layers, and precision extrusion equipment. The midstream consists of R&D and manufacturing companies with Class III medical device qualifications, requiring mastery of core technologies such as multi-layer composite structure design, surface lubrication coatings, and mechanical property control. The downstream primarily targets hospital neurointerventional departments, stroke centers, and vascular surgery departments, entering clinical settings through distributors, centralized procurement, or direct sales. This product boasts high technological barriers and significant clinical value, with the industry's overall gross profit margin typically between 60% and 80%. As of 2025, the average price of domestically produced products was approximately ¥8,000–15,000 per unit, while imported products generally ranged from ¥13,000 to ¥20,000 per unit, with some high-end models even exceeding this price. However, with accelerated domestic substitution and the advancement of local centralized procurement, prices are showing a moderate downward trend. In 2024, the global production of remote access guiding catheters was approximately 157,100 units, with a global average market price of approximately US\$1,400 per unit. The gross

profit margin of major companies in the industry ranges from 43% to 60%. The single-line production capacity is 5,000 units per year.

United States market for Distal Access Guiding Catheter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Distal Access Guiding Catheter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
