## Abstracts

The global Distal Radius System market size is predicted to grow from US\$ 524 million in 2025 to US\$ 654 million in 2032; it is expected to grow at a CAGR of 3.3% from 2026 to 2032.

The distal radius system is an orthopedic internal fixation solution for treating distal radius fractures. It typically includes anatomical plates, locking and non-locking screws, and accompanying surgical instruments to stabilize the fracture and restore the anatomy and function of the wrist joint. This system is widely used in trauma orthopedic surgery, particularly for osteoporosis and complex intra-articular fractures. Its upstream industry chain includes medical-grade metal materials, precision machining consumables, and surface treatment materials; the midstream encompasses precision machining, surface coating, sterilization, and instrument system assembly; and the downstream primarily serves hospitals, orthopedic trauma centers, and surgical service institutions, providing supporting clinical training and postoperative support services. In 2024, the global production of distal radius systems was approximately 1.03 million units, based on an average unit price of approximately US\$520. The overall industry gross profit margin is approximately 55%–70%, reflecting the high technological and added value attributes of orthopedic trauma implants. The total global production capacity of distal radius systems in 2024 was approximately 1.38 million units.

United States market for Distal Radius System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
