The global Distributed Acoustic Sensing market size is predicted to grow from US\$ 652 million in 2025 to US\$ 1205 million in 2031; it is expected to grow at a CAGR of 10.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Distributed Acoustic Sensing (DAS) is an acoustic and seismic sensing capability that uses simple fibre optic communications cables as the sensor. The system works by converting a single optical fibre into tens of thousands of individual highly-sensitive vibrational sensors. Using existing or new cables, it can provide low-cost and high-reliability surface crossing and tunnel construction detection, with power and communications services needed only every 80-100 km. The technology has been proven in worldwide security operations at over one hundred locations in a variety of industries including oil and gas pipelines, railways, and high-value facility perimeters. The system reliably detects a variety of border threats with very few nuisance alarms. It can work in concert with existing border surveillance technologies to provide security personnel a new value proposition for fighting trans-border crime.

The major players in global Distributed Acoustic Sensing (DAS) market include Qinetiq, Halliburton, etc. The top 2 players occupy about 25% shares of the global market. North America and Europe are main markets, they occupy about 80% of the global market. DASI is the main type, with a share over 70%. Oil & Gas is the main application, which holds a share about 70%.
