The global Distributed Feedback Narrow Linewidth Lasers market size is predicted to grow from US\$ 576 million in 2025 to US\$ 905 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

Distributed feedback narrow linewidth lasers are semiconductor lasers designed for high-precision optical communications, sensing, and scientific research. It achieves single longitudinal mode output by integrating a periodic Bragg grating structure inside the laser diode, resulting in a very narrow emission linewidth, usually less than a few megahertz (MHz). This feature makes DFB lasers perform well in applications that require precise wavelength control. Distributed feedback narrow linewidth lasers are widely used in gas detection, distance measurement, and fiber optic sensing because they can provide high resolution and sensitivity.
