The global Distributed Photovoltaic Power Plant market size is predicted to grow from US\$ 154530 million in 2025 to US\$ 233970 million in 2031; it is expected to grow at a CAGR of 7.2% from 2025 to 2031.

Distributed Photovoltaic Generation is an approach to provide solar energy resources by deploying tools and technologies in proximity to the end users of the power. The system for power generation can be installed on rooftops of houses and commercial buildings that will use the energy. This method is in contrast with centralized generation where solar electricity is produced by a large plant and then distributed to consumers through the power grid. Also, the surplus energy produced by individual owners (through solar) can be sold to the power companies.

It is expected that global demand for photovoltaic products will remain high in the next few years. According to our PV & Solar Research Center, by the end of 2022, the global cumulative installed photovoltaic power generation capacity is about 1180 GW. According to the data of China Photovoltaic Industry Association, the global newly installed photovoltaic capacity in 2022 is about 230 GW, and this number in 2023 is predicted to be 280-330 GW. According to the data of the Ministry of Industry and Information Technology, the total output value of China's photovoltaic industry exceeded 1.4 trillion yuan in 2022. From the perspective of production value, mainland China is still the global center of the PV industry. According to the International Energy Agency, China market share in all key products of the supply chain have exceeded 80%. Among them, the production capacity of silicon wafers, solar cells, and components accounts for as high as 98%, 85% and 77%, respectively. According to the data released by the European Photovoltaic Association, 27 EU countries gained a new PV installed capacity of 41.4 GW in 2022. According to the report of the US Solar

Energy Industries Association (SEIA), the US held a new PV installed capacity of less than 19 GW in 2022. But it is estimated that from 2023, the average annual growth rate of new photovoltaic installed capacity will exceed 21%. In terms of Japan, based on data from Fitch and the US Energy Information Administration (EIA), in 2022, Japan's newly installed photovoltaic capacity was 3.130 GW.
