The global Distributed Power Generation Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Distributed power generation equipment refers to equipment that is dispersedly arranged in the energy system and used to generate electricity. These equipment are typically used to meet local or small-scale power needs and can be based on a variety of energy types, including solar, wind, gas, hydro, etc. The deployment of distributed power generation equipment allows energy to be generated, stored and used more flexibly, improving the robustness and sustainability of the energy system. With the development of renewable energy, distributed power generation equipment will be more integrated with renewable energy sources such as solar energy and wind energy to reduce dependence on traditional energy sources. The future development of distributed power generation equipment will be jointly affected by technology, market demand, and policies and regulations. As the energy system changes, distributed power generation equipment will play an increasingly important role in the energy transformation.
