## Abstracts

The global Distributed Power market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Distributed power refers to the generation of electricity from small-scale power generation units that are located close to the end-users or consumers, as opposed to traditional large-scale power plants that require transmission over long distances. These small-scale power generation units can be located in a variety of places, such as on rooftops, in parking lots, or even in individual homes or buildings. Distributed power generation technologies include solar photovoltaic panels, wind turbines, microturbines, fuel cells, and other forms of small-scale renewable energy technologies. These small-scale power generation units can be connected to the electrical grid or used as standalone systems in off-grid applications.

United States market for Distributed Power is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
