Distributed solar inverter is a device used in solar power systems to convert DC power generated by solar panels into AC power. It is usually installed near a photovoltaic array composed of solar panels, and uses electronic components to convert direct current into alternating current for domestic or commercial use. Distributed solar inverters usually have multiple functions, such as maximum power point tracking (MPPT), safety protection, communication interfaces, etc., to ensure the efficient operation and safety of the solar system. This type of inverter is usually connected to the grid, allowing excess power to be injected into the grid to achieve interconnection with the grid.

The global Distributed Solar Inverter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
