Distribution feeder automation is an integral part of system-level automation in contemporary power distribution networks, which improves reliability using self-healing, smart grid technology. The feeder establishes a connection between the substation and end-users without any tapping. Most of the faults occur on feeder lines as these are exposed to detrimental environmental conditions. Thus, utility companies are increasingly opting for feeder automation, which comprises an assembly of numerous smart relays and switching equipment.

The global Distribution Feeder Automation market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
