The global Divided Motor Core market size is predicted to grow from US$ 937 million in 2025 to US$ 1262 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The divided motor core is a core component of a motor designed by dividing the traditional integral laminated core into multiple independent modular units (such as the block mover core), which aims to reduce eddy current loss and improve electromagnetic conversion efficiency. It is widely used in new energy vehicle drive motors, high-precision industrial equipment and special motors. It is estimated that the block motor core as a sub-segment will account for about 5%-8% of the overall motor core market (globally US$16.49 billion in 2024), corresponding to a market size of approximately US$820 million to US$1.32 billion. Its growth is mainly driven by the demand for lightweight new energy vehicles (CAGR 18.2% from 2025 to 2030), the upgrade of high-precision drives in industrial automation, and the iteration of bonding/riveting technology (such as ultra-thin laminated bonded cores to reduce losses). In the future, it is expected to be further expanded in emerging fields such as quantum computing cooling systems and superconducting magnets.

United States market for Divided Motor Core is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Divided Motor Core is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
