According to our LPI (LP Information) latest study, the global DMD Chip market size was valued at US\$ million in 2023. With growing demand in downstream market, the DMD Chip is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global DMD Chip market. DMD Chip are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of DMD Chip. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the DMD Chip market.

At the core of every DLP chipset is an array of highly reflective aluminum micromirrors, which is known as digital micromirror devices (DMD). DMD is an electronic input/optical output micro-electromechanical system (MEMS), which allows developers to perform high-speed, efficient and reliable spatial light modulation.

Using TI's semiconductor technology, each DMD contains up to 2 million independently controlled micromirrors (built on corresponding CMOS memory cells). During operation, the DMD controller loads a '1' or a '0' for each basic storage unit. Next, a mirror reset pulse is applied, which causes each micromirror to deviate electrostatically by approximately one hinge, thereby achieving a corresponding +/-12° state. Due to the resistance of the two spring thimble and the physical stop, the deviation angle of these two effective states is repeatable. In a projection system, the +12° state corresponds to 'on' pixels, and the -12° state corresponds to 'off' pixels. Grayscale graphics are created

by programming the on/off duty cycle of each lens, and multiple light sources can be multiplexed to create RGB full-color images.

Following a strong growth of 26.2 percent in the year 2021, WSTS revised it down to a single digit growth for the worldwide semiconductor market in 2022 with a total size of US\$580 billion, up 4.4 percent. WSTS lowered growth estimation as inflation rises and end markets seeing weaker demand, especially those exposed to consumer spending. While some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.8 percent, Sensors with 16.3 percent, and Logic with 14.5 percent growth. Memory declined with 12.6 percent year over year. In 2022, all geographical regions showed double-digit growth except Asia Pacific. The largest region, Asia Pacific, declined 2.0 percent. Sales in the Americas were US\$142.1 billion, up 17.0% year-on-year, sales in Europe were US\$53.8 billion, up 12.6% year-on-year, and sales in Japan were US\$48.1 billion, up 10.0% year-on-year. However, sales in the largest Asia-Pacific region were US\$336.2 billion, down 2.0% year-on-year.
