The global DNA Cloning Service market size is predicted to grow from US\$ 822 million in 2025 to US\$ 1473 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

DNA cloning services are customized experimental services provided to meet the needs of constructing target DNA fragments, gene sequences, cDNA, ORF, promoters, tags, regulatory elements, gRNA expression cassettes, or multi-fragment combinations. Typically, service providers design or assist clients in designing construction protocols, primers, fragment amplification, enzyme digestion and ligation, seamless assembly, homologous recombination, Golden Gate, Gibson Assembly, Gateway, TA/TOPO cloning, site-directed mutagenesis, strain transformation, positive clone screening, plasmid extraction, sequence verification, plasmid mapping generation, and delivery document preparation. The deliverables of this service typically include recombinant plasmids, glycerol-containing bacteria, stab-forming bacteria, lyophilized plasmid DNA, sequencing peak diagrams, sequence alignment reports, and construction maps. These are primarily used for gene function research, recombinant protein expression, antibody engineering, CRISPR screening, viral vector front-end construction, synthetic biology pathway construction, and early-stage vaccine and drug discovery research.

DNA cloning services were an essential part of the biotechnology industry, providing valuable tools for research, drug discovery, genetic engineering, and various other applications. DNA cloning involves the creation of recombinant DNA molecules by inserting a specific DNA fragment into a vector (such as a plasmid) and then transferring this recombinant DNA into host cells (usually bacteria or yeast) to produce copies of the inserted DNA. DNA cloning services were in demand for generating custom DNA constructs tailored to the specific needs of researchers and industries.

These constructs might include genes, promoters, enhancers, reporter genes, and other genetic elements. The pharmaceutical and biotechnology industries were major consumers of DNA cloning services. They utilized cloned DNA constructs to produce therapeutic proteins, enzymes, and antibodies for research and therapeutic purposes.
