Abstracts

According to this study, the global DNA Polymerase market size will reach US\$ 375 million by 2031.

DNA polymerase is an enzyme that synthesizes DNA molecules from deoxyribonucleotides, the building blocks of DNA. These enzymes are essential for DNA replication and usually work in pairs to create two identical DNA strands from a single original DNA molecule. During this process, DNA polymerase 'reads' the existing DNA strands to create two new strands that match the existing ones.
