DNA and RNA polymerases are important enzymes involved in the replication and transcription of genetic information. They perform critical biological functions within cells. DNA polymerase is primarily responsible for replicating DNA molecules. During cell division, it replicates genetic information by synthesizing new DNA strands. RNA polymerase is responsible for transcribing DNA information into RNA, forming messenger RNA (mRNA), transfer RNA (tRNA), and ribosomal RNA (rRNA). Both play important roles in DNA modification.

The global DNA & RNA Polymerase market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
