## Abstracts

The global DNS-DHCP-IPAM Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

DNS-DHCP-IPAM software is a network management tool used to manage the Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), and IP Address Management (IPAM) functions in a network. DNS translates domain names into IP addresses, DHCP assigns IP addresses to network devices, and IPAM manages IP address resources in the network. These three functions work together to ensure that network devices can communicate properly.

The DNS-DHCP-IPAM software industry is experiencing rapid growth, driven primarily by the development of cloud computing, IoT, and 5G technologies. Cloud service providers need to efficiently manage large amounts of IP address resources, IoT devices require automatic IP address assignment, and 5G networks need to support a large number of connections. These factors are driving demand for DNS-DHCP-IPAM software. The future market size is expected to continue expanding as new technologies become more prevalent and network sizes grow, leading to increased demand for this software.
