Dock House is a prefabricated or custom-built modular structure located at the exterior of a loading dock area, designed to improve loading efficiency, environmental control, and facility safety. It typically integrates components such as a dock leveler, dock shelter or seal, and overhead door, all housed within an insulated or weatherproof enclosure. Dock houses are often installed outside the main building, which allows internal floor space to be maximized while streamlining cargo handling operations. By relocating dock equipment into a self-contained exterior structure, it also helps in reducing energy loss, contamination risks, and structural wear on the facility's primary envelope.
