Document processing services refer to comprehensive lifecycle management solutions for physical or electronic documents provided by professional service providers to businesses or individuals. At its core, these services utilize personnel, processes, and technology to systematically handle the digitization, standardization, intelligent analysis, and secure disposal of documents. Specific services cover everything from scanning, inputting, archiving, and indexing paper documents to format conversion, data extraction, content review, and categorized storage of electronic documents, culminating in secure destruction or long-term preservation. This service aims to help clients transform unstructured document information into manageable, searchable, and usable digital assets, thereby significantly improving operational efficiency, ensuring information security, and meeting compliance requirements.

This industry has a promising future and is rapidly evolving from traditional labor-intensive outsourcing towards digitalization, intelligence, and specialization. The core growth drivers come from three aspects: First, the surge in demand for digitized historical archives and business processes driven by digital transformation and paperless office practices has led to a continuous explosion in corporate needs. Second, the widespread adoption of remote work and distributed team models has spurred strong demand for cloud-based collaborative document processing, management, and security services. Finally, the maturity of artificial intelligence and robotic process automation (RPA) technologies enables document processing to achieve higher accuracy, lower costs, and more intelligent insights. In the future,

comprehensive solution providers that can offer highly automated solutions deeply integrated into enterprise business systems and comply with stringent data security and privacy protection standards will lead market development.
