The global Dodecyl Trimethyl Ammonium Chloride market size is predicted to grow from US\$ 176 million in 2025 to US\$ 227 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

Dodecyl Trimethyl Ammonium Chloride is a typical cationic quaternary ammonium surfactant, appearing as white crystals or powder, or sometimes as a pale yellow liquid. It has excellent bactericidal, disinfecting, emulsifying, antistatic, and softening properties.

Its upstream components are basic petrochemical raw materials, primarily dodecyldimethylamine (prepared from dodecyl alcohol or dodecyl halide) and methyl chloride. The market supply and price fluctuations of these basic raw materials directly impact the cost of DTAC. DTAC has a wide range of downstream applications. As a cationic surfactant, it is primarily used as a fungicide, disinfectant, and antistatic agent.

Prices vary depending on the product form and activity level; for instance, a 50% solution is priced at approximately \$1,200 per ton, a 70% solution at around \$1,600 per ton, and a 99% white powder at approximately \$14,000 per ton. The industry's gross profit margin hovers in the range of 25% to 35%.

Dodecyltrimethylammonium Chloride (abbreviated as 1231 or DTAC) is a highly representative single-chain alkyl quaternary ammonium salt cationic surfactant. It is currently situated in a mature phase of its industry lifecycle, transitioning from a focus on scale expansion to functional customization. In terms of industry drivers, the sophisticated upgrading of the personal care and home care markets serves as the core engine for its growth. Leveraging its exceptional antistatic, softening, emulsifying, and

bactericidal properties, 1231 enjoys a remarkably high penetration rate in applications such as hair conditioners, fabric softeners, and hygiene and disinfection products. In the industrial sector, as oilfield exploration shifts toward deeper and more geologically complex formations, the inelastic demand for 1231?acting as a highly efficient corrosion inhibitor for acidification and a biocide?remains robust. Currently, environmental compliance stands as the most significant challenge confronting enterprises; this not only compels manufacturers to increase their investment in the treatment of industrial waste but also subjects them to direct substitution pressure from bio-based cationic surfactants, such as ester-based quaternary ammonium salts.
