Abstracts

The global Domain Controller SerDes Chip market size is predicted to grow from US$ 667 million in 2025 to US$ 2299 million in 2032; it is expected to grow at a CAGR of 19.7% from 2026 to 2032.

The Domain Controller SerDes Chip is a high-speed data transmission core component used in vehicle domain control systems. It enables efficient serial-parallel signal conversion across multiple communication buses within the domain architecture, featuring low latency, high bandwidth, and strong reliability, serving as a key foundational chip in the evolution of intelligent automotive electrical and electronic architectures. In 2024, the production of the Domain Controller SerDes Chip was 221.6 million units with an average price of 2.5 USD per unit. The single-line annual capacity was approximately 0.5 million units, and the average gross margin was about 58%. The upstream segment includes semiconductor materials such as wafers, substrates, and packaging materials, along with precision manufacturing equipment including lithography machines, etchers, and ion implanters. Representative suppliers include SUMCO, GlobalWafers, Shin-Etsu, ASML, Applied Materials, Lam Research, as well as Chinese companies such as Shanghai Silicon Industry Group, AMEC, and JCET. The midstream segment focuses on chip design and process implementation, covering physical layer IP integration, analog front-end and mixed-signal circuit design, packaging and testing process development, and verification of signal integrity and reliability. The downstream applications are mainly in commercial and passenger vehicles, with representative customers including Daimler, Volvo Trucks, Cummins, SAIC Motor and Geely.

Automotive-grade SerDes chips are positioned for accelerated adoption driven by the proliferation of multi-camera and multi-sensor ADAS/automated driving suites and the

shift to high-bandwidth in-vehicle Ethernet architectures. Standardization efforts and open ecosystem initiatives are reducing integration friction and unit costs, while technical requirements for low latency, deterministic links and automotive reliability create a high-barrier moat for qualified suppliers — making SerDes not only a technical enabler for next-generation domain controllers but also an attractive, long-term market segment for semiconductor vendors and tier-1 suppliers.
