Abstracts

The global Domain Takedown Service market size is predicted to grow from US\$ 10013 million in 2025 to US\$ 13450 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Domain Takedown Service refers to the cancellation, release, or removal of registered internet domain names during their lifecycle or after expiration, performed by registrars or related service providers. This service may include privacy data cleanup, DNS resolution termination, filing/compliance unbinding, and related digital asset disposal. This type of service includes both user-initiated domain name deletion and involuntary deletion due to non-renewal, violations, or legal requirements. It also extends to supporting services such as 'expiration deletion management,' 'registration snatching and release monitoring,' and 'data cleanup and security compliance,' making it a crucial part of domain name lifecycle management.

With the continuous growth in the number of global internet websites, increased corporate awareness of digital asset management, and increasingly stringent brand protection and compliance requirements, the demand for full domain name lifecycle management is constantly rising. Simultaneously, a large number of domain names enter a 'deletion-release-redistribution' cycle due to project closures, corporate restructuring, or investment activities, spurring the development of related services such as deletion management, expiration monitoring, and domain name trading. Furthermore, data privacy regulations are driving increased demand for information cleanup and compliance processing during domain name deletion, while the widespread adoption of automated domain name management platforms is making this type of service more standardized and scalable. Therefore, although 'deletion' itself is a basic function, the value-added services derived from it have the potential for continued

growth and will be integrated into the larger domain name and digital asset service market system.
