Dome Shadowless Light Source is a lighting device used in machine vision systems. Based on diffuse reflection and shadowless lighting technology, the light is reflected and diffused multiple times inside the dome, and shines on the object from multiple angles, reducing or eliminating the shadows and highlights on the surface of the object, making the details and features of the object more clearly visible. The light is uniform and flexible to adjust, which plays an important role in improving image quality, reducing false detection rate and improving detection accuracy. It plays an important role in industrial detection, indoor lighting, landscape and stage lighting and other fields.
