The global Domes for Semiconductor Equipment market size is predicted to grow from US\$ 119 million in 2025 to US\$ 177 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

The domes utilized in the HDP CVD process consist of various components such as ceramics, copper tubing, brackets for securing the tubing, and silicones. Notably, the copper tubing, which boasts high thermal conductivity, undergoes chemical reactions with the coolants circulating within during the process. Consequently, precipitates accumulate and rust forms, leading to leaks. This results in a relatively short lifespan for the copper tubing compared to other dome components, ultimately becoming the primary factor that necessitates frequent replacement of the entire dome assembly.
