The report requires updating with new data and is sent in 48 hours after order is placed.

Doppler navigation set is a speed log that uses the Doppler effect to measure the speed of the ship in the longitudinal and transverse directions. Two sets of dual-beam devices are installed on the bottom of the ship, which are arranged in the longitudinal and lateral directions, respectively, to measure the longitudinal and lateral movement speeds of the ship. Combined with the heading data provided by the compass, it can measure the moving speed and mileage of the ship in the north-south and east-west directions, and display the estimated ship position expressed in latitude and longitude.
