A dosing conveyor is a type of conveyor system that is specifically designed for accurately measuring and transferring a predetermined quantity of material from one location to another. It is commonly used in industries such as mining, agriculture, and manufacturing, where precise dosing or batching of materials is required.

The dosing conveyor typically consists of a belt conveyor with a specially designed mechanism for controlling the flow rate of material. This mechanism can be in the form of adjustable gates, feeders, or other devices that regulate the amount of material being transferred.

Dosing conveyors are often used in conjunction with other equipment, such as weigh scales or volumetric feeders, to ensure accurate dosing of materials. They are commonly used for applications such as feeding materials into mixers, filling containers

or bags with a specific quantity of material, or transferring materials between different processing stages.
