The dosing mixer is mainly composed of electric motor, cycloidal gear transmission device (built-in cycloidal gear set), stirring shaft and stirring blades, etc. The mixing system is combined with the reaction tank by using the stirrer. When the electric power is supplied to the motor, the rotation of the stirrer propels the water movement in the reaction tank, and the chemical and water in the reaction tank fully combine to react, shortening the mixing time of the chemical and water and greatly improving the efficiency of using the chemical.
