The global Dot Peen Marking Machines market size is predicted to grow from US\$ 202 million in 2025 to US\$ 305 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

Dot peen marking technology allows manufacturers to automate the direct part marking process, ensuring 100% reliable part traceability. Dot peen marking machines use a pneumatically driven marking pin to stamp (or peen) a series of very small, closely spaced dots to form straight or curved lines. Also called pin marking technology, the dot peen marking method provides fast, accurate marks while exerting minimal force on the part surface. Text, logos, and 2D Data Matrix codes can be marked in any size or orientation.

Dot peen marking technology is one of the most versatile marking solutions on the market today. Dot peen marking equipment capabilities range from simple nameplate requirements to completely integrated solutions for marking directly onto fabricated components in-line.

Economical: very low acquisition cost and reduced cost of use due to no consumables being required (unlike punch, roller, electrochemical or bubble jet marking).

Multipurpose: marking on all types of shapes and surfaces thanks to the 3D stylus and on materials with hardness up to 62HRC.
