## Abstracts

The global Double Axis Cutting Machine market size is predicted to grow from US$ 709 million in 2025 to US$ 1089 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

The cutting machine is mainly used for processing materials such as silicon wafers, ceramics, glass, gallium arsenide, etc., and is also widely used in industries such as integrated circuits (IC) and semiconductors. As one of the processing equipment for semiconductor chip post-processing, the wafer cutting machine is used for micro processing such as wafer cutting, segmentation, or slotting. The quality and efficiency of its cutting directly affect the quality and production cost of the chip. A dual axis wafer cutting machine is a device that uses two high-speed rotating blades to cut wafers, achieving high-precision and high-efficiency cutting processes. The characteristic of a dual axis wafer cutting machine is that it can simultaneously cut two directions of the wafer, improving cutting efficiency and yield. Suitable blades and cutting parameters can be selected according to different material and process requirements to ensure cutting quality and stability. The non-contact height measurement unit can automatically measure and adjust the distance between the blade and the wafer, avoiding blade wear and wafer damage..
