A Double Burner Gas Stove is a cooking appliance that features two separate burners fueled by gas, typically natural gas or propane. These stoves are designed for domestic use and are a common feature in kitchens, providing a convenient and efficient way to cook with gas. Each burner on a double burner gas stove can be controlled independently, allowing for different heat levels for various cooking tasks. Users can simmer a sauce on one burner while boiling water on the other, for example. The stove usually has two dials or knobs, one for each burner, to control the intensity of the flame. The advantages of double burner gas stoves include the ability to cook quickly, precise temperature control, and the flexibility to perform multiple cooking tasks simultaneously. They are also generally easier to clean than some other types of stoves, as they lack the electrical components of induction or electric stoves.

The global Double Burner Gas Stove market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
