The global Double Crystal DKDP Pockels Cells market size is predicted to grow from US\$ 28.7 million in 2025 to US\$ 53.1 million in 2032; it is expected to grow at a CAGR of 9.4% from 2026 to 2032.

Double Crystal DKDP Pockels Cells are electro-optic modulators that consist of two DKDP crystals arranged in a specific configuration. These crystals are placed between electrodes and subjected to an electric field, which alters their refractive index and thus the polarization state of the incident laser light. The use of two crystals allows for more precise control over the polarization state and can enhance the performance of the modulator. They are characterized by high optical uniformity, low optical loss, and rapid polarization control, making them ideal for various high-power laser applications.
