The global Double Drum Dryers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Drum dryer, commonly known as roller scraper dryer, is a conductive continuous drying equipment, including steam drum dryer and thermal oil drum dryer. When working, the material distribution method suitable for the material is adopted to evenly apply the original liquid or slurry material on the outer surface of the drum. During the process of one rotation of the drum, a thin film is formed and dried. After the dried film reaches the scraper part, it is peeled off the drum surface by the scraper and falls into the spiral crushing conveyor for transportation to the downstream process; the drum surface with the stripped material rotates to the distribution area and the slurry is coated again, and the drying is cyclically continuous.
