Dual focusing mass spectrometer? is a mass spectrometry instrument that can achieve both direction and mass focusing of ion beams. It consists of a sector-shaped electrostatic field analyzer and a sector-shaped magnetic field analyzer. The working principle of the double-focusing mass spectrometer is based on the effect of electromagnetic fields on charged particles. The ion beam is accelerated in the electric field to gain energy, and then deflected in the magnetic field according to the difference in mass, and finally focused on different positions to achieve mass analysis?.
