The global Double-Girder Electric Hoist Gantry Crane market size is predicted to grow from US\$ 83.31 million in 2025 to US\$ 111 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

The double-girder electric hoist gantry crane is a rail-mounted gantry crane supported by two main beams and using an electric hoist as its lifting mechanism. The gantry adopts a double-girder structure, with the outriggers and lower crossbeam forming a gantry frame. The electric hoist runs laterally on the main beam rails, realizing the lifting and lateral movement of heavy objects. It is suitable for heavy-duty scenarios such as open-air freight yards, port terminals, and precast component plants.

Upstream industries mainly include suppliers of core components such as high-strength steel plates and structural steel, electric hoists and motor reducers, crane wheel sets and buffers, and electrical control systems and safety devices. Downstream industries cover end users such as heavy machinery manufacturing, port logistics, railway freight yards, water conservancy and hydropower, and large precast component plants, achieving application through direct supply from crane manufacturers, engineering project bidding, and equipment leasing channels. The global unit price of a double-girder electric hoist gantry crane is US\$75,100, with annual sales of approximately 1,134 units and a global annual production capacity of 1,600 units. The industry profit margin is 18%.
