The global Double Glass Reactor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The double glass reactor is designed with double-layer glass. The reaction solvent is placed in the inner layer for stirring reaction, and the interlayer can be connected to different cold and heat sources (refrigeration liquid, hot water or hot oil) for cyclic heating or cooling reaction. Under set constant temperature conditions, in a closed glass reactor, the stirring reaction can be carried out under normal pressure or negative pressure according to the use requirements, and the reaction solution can be refluxed and distilled. It is an ideal choice for modern fine chemicals, biopharmaceuticals and new technologies. Ideal pilot and production equipment for material synthesis
