The double-head laser wire stripping machine is a device that uses a dual laser optical path structure to perform high-precision non-contact stripping of wire materials such as wires and cables. It has two independent or collaborative laser emission units, which can efficiently strip the insulation layer of both ends or different parts of the wire at the same time. This equipment usually uses ultraviolet or infrared lasers, and through precise control of laser power, focal length and motion path, it can quickly and neatly strip the outer insulation or inner shielding of different types of wires (such as multi-core wires, coaxial wires, flat cables, etc.), without mechanical stress and without damaging the copper core. It is widely used in precision electronics, medical equipment, aerospace, automotive wiring harnesses and other fields that have extremely high requirements for wire stripping quality and efficiency.
