A double - heads tube bender is a specialized industrial machine designed to bend tubes at two distinct points simultaneously. Equipped with two bending mechanisms, it significantly enhances the productivity of tube - bending operations. This type of bender allows for the creation of complex tube geometries more efficiently compared to single - head counterparts. It can handle various tube materials, such as metal (including aluminum, steel, and copper) and certain plastics, adjusting the bending radius and angle according to specific manufacturing requirements. The double - heads design not only reduces production time but also ensures better consistency in the bent tubes, making it a crucial tool in industries like automotive manufacturing, plumbing, and HVAC, where precision - bent tubes are essential components.
