The global Double Hinge Expansion Joint market size is predicted to grow from US$ 1007 million in 2025 to US$ 1415 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

The double hinge expansion joint is composed of two corrugated pipes connected to the intermediate pipe, pins, hinge plates, and vertical plates and other structural parts. It can only absorb lateral displacement in one plane and can withstand the pressure and thrust of the bellows. Planar double hinge expansion joints (referred to as double hinge expansion joints) are often used in L-shaped and planar Z-shaped pipelines to absorb lateral displacement. The pull plate is more rigid than the complex universal long pull rod. It can absorb more lateral displacement by using longer pull plates. The disadvantage is that it can only absorb the displacement of the plane. The universal double hinge type expansion joint (referred to as the double universal hinge type expansion joint) can absorb displacement in any direction because of the pin blocks used in the hinge. Commonly used in facade Z-shaped pipes. In 2024, global Double Hinge Expansion Joint production reached approximately 764 k units, with an average global market price of around US$ 1284 per unit.

United States market for Double Hinge Expansion Joint is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
