A centrifugal fan is a mechanical device for moving air or other gases in a direction at an angle to the incoming fluid. Centrifugal fans often contain a ducted housing to direct outgoing air in a specific direction or across a heat sink; such a fan is also called a blower, blower fan, or squirrel-cage fan? Double Inlet signifies that the Air is drawn in from two sides of the Blower and exited from one outlet. The Rotor with impeller is dynamically Balanced in two planes, for vibration free running during its entire life. The

assembly of Motor and Impeller is essentially mounted in a technically designed Housing for optimum performance. The External Rotor Motor is cooled with the air stream flowing over it.
