Double-layer thermal CTP plate is a high-performance printing plate for computer direct platemaking. It adopts a double-layer coating structure (thermosensitive layer + ink-receptive layer) and achieves high-precision image and text imaging through infrared laser exposure. Its core advantages include high resolution (up to 1%-99% dot reproduction), long print run (more than 300,000 prints), and strong chemical resistance. It is suitable for commercial printing, packaging printing and high-end publishing. Compared with traditional PS plates or single-layer CTP plates, it has higher platemaking efficiency and better printing durability, and is suitable for high-speed rotary printing presses.

United States market for Double-layer thermal CTP plate is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
