Double pass reverse osmosis system refers to equipment that operates in series through a two-stage reverse osmosis system. It is mainly used to improve the purity of water and remove more impurities. The two-stage reverse osmosis system includes the first and second stages of reverse osmosis treatment. After the pH value of the water treated by the first-stage reverse osmosis system is adjusted, it is then sent to the second-stage reverse osmosis system by the second-stage high-pressure pump for treatment, thereby obtaining purer water.
