The Production is about 50,000 units. Double-scissor Vehicle Lift is a vehicle lifting system that uses a dual-scissor mechanical structure to raise and lower vehicles, typically driven by hydraulic or electric power. It features a compact footprint, smooth lifting motion, and adjustable load capacity, making it suitable for chassis work, tire replacement, brake servicing, and suspension maintenance. This type of lift is widely used in automotive repair shops, dealerships, and vehicle inspection centers, especially in spaces where flexibility and efficient use of area are important.

Double-scissor Vehicle Lifts are evolving toward greater intelligence, automation, and higher load capacity, while supply chain optimization and repair shop needs drive innovation. Upstream suppliers are improving the standardization and reliability of high-strength steel, hydraulic systems, motors, and control modules to accommodate EVs and large SUV chassis. Midstream manufacturers are integrating AI-based fault diagnostics, remote monitoring, wireless operation, and automatic synchronization control to increase maintenance efficiency and reduce labor costs. Downstream repair shops, dealerships, and inspection centers are accelerating digitalization, integrating lifts with workshop management software, vehicle diagnostic systems, and automated repair workflows. Additionally, modular designs, energy-efficient hydraulic systems, and compact structures will become key trends to enhance competitiveness and adapt to space-constrained maintenance environments.
