The global Double Screw Air Compressors market size is predicted to grow from US\$ 21180 million in 2025 to US\$ 27820 million in 2032; it is expected to grow at a CAGR of 4.0% from 2026 to 2032.

Screw air compressor is a kind of rotary displacement compressor, generally composed of screw host, motor, cooler, filter, drainage device and so on. The working principle of the screw air compressor is a pair of intermeshing helical rotors arranged in parallel in the main engine. The male rotor drives the female rotor to perform a rotary motion so that the volume between them and the cavity gradually decreases to realize the gas flow. compression and power transmission. Screw air compressors are divided into single-screw and twin-screw according to the number; according to whether there is lubricating oil involved in the compression process, they are divided into oil-injected and oil-free screw air compressors; oil-free compressors are divided into dry and water-lubricated two kinds.

The industrial air compressor market is driven by infrastructure investments, improved connectivity of cross-border pipeline networks, and increasing demand for energy-efficient air compressors.
