The global Double-Screw Oil Press market size is predicted to grow from US$ 221 million in 2025 to US$ 303 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2024, global Double-Screw Oil Press production reached approximately 9408 units, with an average global market price of around K US$ 23 per unit. A double-screw oil press is a continuous oil extraction machine that utilizes two intermeshing, co-rotating screw shafts to progressively convey and press materials within a press cage. Its core working principle involves feeding oil-bearing materials into the inlet, where the twin screws continuously advance them. As the materials move forward, the volume of the press chamber gradually decreases, generating immense mechanical pressure. This pressure ruptures the oil cells and squeezes out the oil, which escapes through the gaps in the press cage, while the residual solid matter (oil cake) is continuously discharged from the cake outlet at the end of the chamber. Known for its high pressing efficiency, large capacity, high automation, and high oil yield, it serves as the mainstream pre-pressing or full-pressing equipment in modern vegetable oil plants.

United States market for Double-Screw Oil Press is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
