According to our (LP Info Research) latest study, the global Double-Sided Extrusion Coater market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Double-Sided Extrusion Coater is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Double-Sided Extrusion Coater market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Double-Sided Extrusion Coater are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Double-Sided Extrusion Coater. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Double-Sided Extrusion Coater market.

The double-sided extrusion coating machine is mainly composed of an automatic roll-changing and unwinding mechanism, an extrusion coating system (including a slurry conveying system), a double-layer drying system, a pinch system, and an electrical control system. The extrusion coating mechanism is the same as the single-side extrusion coating machine, which integrates the advantages of high precision and precise control of the single-side coating machine. The double-layer drying system is composed of fans, air heat exchangers, heat preservation boxes, inspection doors, exhaust ducts, etc. The temperature of the incubator can be controlled in sections. The air inlet and outlet pipes are equipped with air volume adjustment dampers, which can

adjust the air inlet and outlet air volumes according to the needs. The box and all pipelines are insulated to prevent heat loss and safe operation. After the wet pole piece of the cloth enters the drying oven, the oven adopts the up and down air supply drying method to carry out efficient drying. The dry air is sent to the inside of the oven after being heated by the hot air system by the fan, and is evenly blown to the wet coating by the air holes.
