The global Double Sided Lathe market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A double-sided lathe is a specially designed lathe that can process two opposite surfaces of a workpiece at the same time. Compared with a traditional single-sided lathe, a double-sided lathe is equipped with two independent tool holder systems, one on each side of the workpiece, that can perform turning operations simultaneously. This design greatly improves processing efficiency and production capacity, because double-sided processing tasks can be completed in one process, reducing the transfer time and operational complexity of the workpiece between different equipment.
